Within the European Union (EU) the consideration of supply security is of particular significance as the member states depend on outside sources, meaning principally oil and gas, to satisfy their need of energy. The EU-27 was dependent on oil imports on 82.6% and on gas imports on 60.3% in 2007. Own resources are not sufficient and in the present days the EU merely covers 46.9% of the energy consumption by its own means. When the current trends proceed the EU will be dependent on 90% for oil, 70% for gas and 100% for coal in years 2030-40. Therefore, the role of producer countries becomes increasingly important, especially regarding Russia as it is the biggest...
